1. How The Game Works

Thank you for purchasing this asset. This file will explain the project in detail, outlining the scripts, project layout and how to use it.

Arrow Game, is a puzzle game that your goal is simple: extract each arrow without causing a collision.

It is a simple game which can be fun.

2. Features

- Full game ready for play
- Simple one-touch gameplay suitable for everyone
- Automatic level generator with 1000+ levels
- Easy to understand C#.

3. Controls

remove lines	[touch]
--------------	---------

restart level	[R]
---------------	-----

next level	[N]
------------	-----

previous level	[P]
----------------	-----

4. Folder Layout

- QstarStudio

- Arrow Game

- Prefabs //Holds all the game's prefab game objects

- Triangle.prefab

- Scripts //Holds all the game's scripts

- ArrowGameManager.cs

- LineController.cs

- LineGenerator.cs

- Textures //Holds all the game's textures

- Icon_Heart.png

- Square.png

- Triangle.png

- ArrowGame.unity

- readme.txt

5. Scripts

- ArrowGameManager.cs

This script controls the game, loads the level, monitors the scores and controls the win state and UI .

- LineController.cs

Every line has this script. This script is used to check whether a line can be moved out and to animate the line's movement.

- LineGenerator.cs

This script is a level generator. The parameters `width` and `height` specify the size of the level, and `maxlinelength` specifies the maximum length of the line.
